Why a Napoleon® Wood Burning Fireplace?

The answer is quite simple. No other hearth manufacturer in North America has perfected wood burning technology to the level that Napoleon® has... perfecting true craftsmanship to last a lifetime. Years of research, strict quality testing and advanced wood burning technology have surpassed critical standards, providing you with the cleanest, most efficient wood burning products. Napoleon® products are backed by the President's Limited Lifetime Warranty, guaranteed to give you the solid performance you deserve.

Best Burn Times In The Industry... Napoleon® wood burning products offer state-of-the-art technology, unlike any others, completely utilizing the firebox chamber with a fully lined refractory system. The kiln-like atmosphere allows for an amazing long day or overnight burn. The single lever combustion control allows for simple regulation of the burn rate.

No Power? No Problem!... We all feel vulnerable when there is a power outage, but with a Napoleon® wood burning fireplace you can rely on comfort and heat when you need it most. Rest assured, you can enjoy a cozy, warm atmosphere when the power is out!

Warming Homes, Not The Environment... Napoleon® products are designed not only for outstanding heating efficiencies but Napoleon® also takes great pride in their commitment to provide environmentally friendly wood burning products. Napoleon's wood burning technology exceeds EPA (Environmental Protection Agency) standards burning very clean with low emissions, helping to make a difference in keeping our environment safe.

NZ6000 - High Country™

A Showcase For Your Home

Napoleon's dedicated team of designers and engineers have taken wood burning to a higher level and created a distinctive fireplace experience never seen before in the industry! The perfect blend of elegant, rustic styling and state-of-the-art wood burning technology makes this luxurious fireplace an ideal choice to add class and artistry to your home. With an impressive 792 sq. in. viewing area the NZ6000 High Country™ stands out in the crowd and is well deserving of the Napoleon® insignia. Treasured for its quality and performance, every Napoleon® fireplace is hand crafted to last for generations.

NZ6000

Up to 100,000 BTU's

41" w x 36 1/2" h as shown

EPA Certified – Exempt

NZ6000 shown with painted black double doors, faceplate and keystone

For more detailed specifications on this unit, see pages 10 & 11

Options & Accessories

Complete Arched Wrought Iron Double Doors, Faceplate, Grill & Keystone

Andirons Painted Black Finish (standard)

Arched Double Door Screen Kit with Heavy Duty Stand

Country Crane & Hearth Pot

Powerful "Whisper Quiet" Blower System with Washable Filter

Arched Faceplate Three Colour Options*

Arched Double Doors Four Colour Options*

Arched Upper Grills Three Colour Options*

Keystones Three Colour Options*

NZ6000 shown with wrought iron double doors, faceplate, upper grill and keystone

 HIGH
COUNTRY

NZ3000 - High Country™

Wood Burning Elegance

Napoleon's EPA certified NZ3000 wood burning fireplace is the smaller version in the powerful High Country™ Series. The NZ3000 offers superior heavy duty boiler plate steel, full refractory lined firebox with advanced EPA technology and ultra high efficiencies which allow for easily sustained overnight burns. Five stainless steel secondary air tubes supercharge the fuel burning process and generates a fascinating display of YELLOW DANCING FLAMES®. Only Napoleon® provides wood burning fireplaces that have an elegant, rustic style and are built to these high quality standards.

NZ3000

Up to 60,000 BTU's

40" w x 30 1/4" h as shown

EPA Certified

Outstanding Features

of Napoleon's Advanced Technology

Help Protect The Environment With A Napoleon® Wood Burning Fireplace

Heating your home with a Napoleon® high efficiency, EPA (Environmental Protection Agency) approved fireplace, stove or insert releases no more carbon dioxide than a dying tree would lying on the forest floor. In fact, when the entire carbon cycle is considered, a Napoleon® EPA Approved fireplace heats your home more efficiently and with less impact on the environment than any other heating fuel option.

Outstanding Craftsmanship

Fine details are designed in every aspect of Napoleon® fireplaces... individually handcrafted with pride of excellence.

WHISPER QUIET Heat Circulating Blower System

The extreme heat resistant "H" class bearings featured in Napoleon's superior heat circulating blower, creates a lasting "whole home" comfort with adjustable high & low speeds.

Secondary Air Tube - Kiln Construction

Napoleon's secondary air tube is insulated with ceramic fibre and protected with a stainless steel cover plate, ensuring complete combustion. This fully lined refractory firebox acts as a kiln, concentrating the maximum amount of heat to efficiently heat your home.

Solid Hinged Doors

Manufactured with heavy gauge steel, the doors are conveniently hinged on most models for easy opening .

High Country™ - NZ6000

Anatomy of the Perfect Fireplace

1. Combustion and dilution air is brought into the unit through the fresh air intake collars located on the bottom side of the unit.
2. The combustion air is brought into the firebox through many small holes in the airwash located at the side and top of the opening.
3. Safety switch, the blower stops automatically when door is open and starts again when door is closed
4. A single air control regulates the burn rate.
5. Combustion takes place inside the firebox, smoke and gases are moved around a large baffle system into a second chamber for complete combustion and extended flame path to extract maximum amount of heat and exhausts out the chimney.
6. The optional blower provides an ideal means of circulating warm air within the home. Where location permits and extreme cold temperatures are not experienced, this blower may also be installed to utilize fresh outside air to introduce "positive pressure" to the home. The powerful 320 CFM blower can be installed remotely from the unit (ie. basement) so you can enjoy increased air circulation with WHISPER QUIET operation.
7. The optional hot air gravity vent system may be used to distribute heat to an adjoining room (located either above, or beside the room containing the fireplace).
8. Summer by-pass damper allows more heat to flow straight up the chimney so you can enjoy your fireplace even in the warmer months.
9. Heavy duty secondary air tube introduces just the right amount of air to increase efficiency through complete combustion.

Approved with chimneys Any 8" diameter chimney listed to these standards may be installed. In accordance with these standards, the unit may also be connected to any chimney listed to CAN/ULC-S604 and CAN/ULC-S629 for Canada or UL-103HT for the United States.

Minimum Clearance to combustibles

Minimum, fireplace	"0" to stand offs (rear) 6" to sides
Ceiling to enclosure	120" from the base of the unit (unless shielded with metal studs and cement board)
Ceiling (in front of fireplace)	84" from the base of the unit
Chimney	2" (follow manufacturer's instructions)
Hot air gravity duct work	1"
Mantle to top of faceplate	from 12" (with mantel protruding 2") to 18" (with mantel protruding 8")
Minimum hearth extension	20" x 61 1/2" non-combustible surface

Hot Air Venting Options

High Country™ - NZ3000

Anatomy of the Perfect Fireplace

1. Combustion air is brought into the unit through the fresh air intake collar located on the bottom side of the unit.
2. Heavy duty secondary air tubes introduce just the right amount of air to increase efficiency through complete combustion.
3. Combustion takes place inside the firebox, smoke and gases are moved around a large baffle system into a second chamber for complete combustion and extended flame path to extract maximum amount of heat and exhausts out the chimney.
4. The optional hot air gravity central heating vent system may be used to distribute heat to an adjoining room (located either above or beside the room containing the fireplace).
5. The optional blower provides an ideal means of circulating warm air within the home. Where location permits and extreme cold temperatures are not experienced, this blower may also be installed to utilize fresh outside air to introduce "positive pressure" to the home. The powerful 320 CFM blower can be installed remotely from the unit (i.e. basement) so you can enjoy increased air circulation with WHISPER QUIET operation.
6. Radiant Heat
7. A single air control regulates the burn rate.
8. High Heat Ceramic Glass
9. Cool room air circulates around the firebox and is pushed back out into the room for additional heat.
10. Fully insulated outershell to reduce clearances.
11. Two piece, high density ceramic, removable baffle allows easy access for chimney cleaning and maintenance.

Approved with chimneys

Any 7" or 8" diameter chimney listed to these standards may be installed. In accordance with these standards, the unit may also be connected to any chimney listed to CAN/ULC-S604 and CAN/ULC-S629 for Canada or UL-103HT for the United States.

Minimum Clearance to combustibles

& Gravity Vent Option

NZ-26

Anatomy of the Perfect Fireplace

Install as a zero clearance fireplace with a factory built chimney or as a masonry fireplace using an existing or new masonry chimney.

Four different heating usage options:

1. Standard installation heats through natural convection
2. Gravity, hot air vent system to heat adjoining rooms
3. Central system with thermostatic control for multi-room heating
4. Thermostatically controlled system connects to existing duct work

Approved with chimneys

Any 6" diameter chimney listed to these standards may be installed. In accordance with these standards, the unit may also be connected to any chimney listed to CAN/ULC-S604 and CAN/ULC-S629 for Canada or UL-103HT for the United States.

Minimum Clearance to combustibles

Minimum, fireplace	"0" to stand offs (rear) 6" to sides
Ceiling of enclosure	72" from the base of the unit (unless shielded with metal studs and cement board)
Ceiling (in front of fireplace)	72" from the base of the unit
Chimney	2" (follow manufacturer's instructions)
Hot air gravity duct work	1"
Mantle to top of faceplate	from 24" (with mantel protruding 2") to 30" (with mantel protruding 8")
Minimum hearth extension	16" x 50" non-combustible surface
