PATENTED AUTOMATIC AIR CONTROL

This patented, user-friendly mechanism automatically reduces the amount of combustion air introduced during ignition to the desired burn rate setting. The result is a beautifully consistent fire burning to its full capacity.

REVERSIBLE CAST IRON PANELS

Crafted with care, our heavy-duty cast iron panels are stamped with a brick pattern on one side and a flowing contemporary design on the other. These reversible panels provide a versatile design that is as beautiful as it is functional.

QUALITY CONSTRUCTION

Supreme manufactures high-quality fireplaces by combining advanced engineering with premium materials like steel for durability and efficiency. Their fireplaces feature airtight combustion systems for optimal heat output and energy efficiency, while also offering sleek, stylish designs to suit various interiors.

BUILT WITH STRENGTH. DESIGNED FOR WARMTH.

The framing structure of a see-through fireplace requires careful planning, as it must support the fireplace unit while accommodating openings on both sides. Built with non-combustible materials, the framing ensures proper ventilation and heat management. Its versatility can be integrated into walls between living spaces, dividing rooms while maintaining visual continuity. This structural design enhances the aesthetic appeal of modern homes and maximizes the fireplace's functional value by heating two areas simultaneously.

UNIQUE DOOR OPERATION

The dual blower system helps distribute the convection heat more efficiently into the room. As the combustion progresses, the blowers automatically activate with the heat and can be set using the variable speed control.

DUAL BLOWER SYSTEM (165 CFM)

The dual blower system helps distribute the convection heat more efficiently into the room. As the combustion progresses, the blowers automatically activate with the heat and can be set using the variable speed control.

HOW THE ASTRA DUO 38 WORKS
